“Lies, Damned Lies, and Statistics”

by Jef Mallett

May 08, 2006

The Power of Statistics

It's a data-driven world

- Evidence-Based Decisions
 - Performance Tracking
 - Resource Allocation
 - Identifying Patterns
 - Setting Realistic Goals
- Data Interpretation and Decision-making
 - Performance Metrics and KPIs
 - Cultural Impact
 - Risk Management

“It is the mark of a truly intelligent person to be moved by statistics.” - George Bernard Shaw

But the Numbers Game is Just That, a Game

- Misinterpretation
- Cherry-Picking Data
- Correlation vs. Causation
- Visualization
- Ignoring Margin of Error
- Spurious Precision
- Survivorship Bias

Figures don't lie, but liars can figure." - Darrell Huff

#1: Say What You “Mean”

The “Mean”ing of Averages

- Current average income per person in US = 59,384 USD
- Average household size in US = 2.63 people
- Household income obviously = \$156,179.92
(It’s not)

To earn a million dollars, you just need to have 14.8 kids, right?

Your KPI for downtime is 1 hour per month trailing.

Which one would you rather report?

1.56 Hours/month or 0.53 Hours/month

“It is now proved beyond doubt that smoking is one of the leading causes of statistics.” – Fletcher Knebel

CartoonStock.com

#2: Never Deviate

[How Sample Size Affects Standard Error - dummies](#)

In ancient times they had no statistics so they had to fall back on lies. – Stephen Leacock

#3: Sample for Your Desired Results

TANSTAAFS (with apologies to Robert Heinlein)

- Results are only as good as the sample data.
 - But it can be really convincing
 - Size matters (4 out of 5 SREs prefer OpenTofu)
 - Bias is the hidden trap
 - **If you can't find the bias, look harder**
If you sample only iPhone users, Android doesn't exist
 - So is access
If you sample in a first class airline lounge, well...
 - Questions (and interviewers) can be their own bias
- Accuracy of observation is the equivalent of accuracy of thinking. – Wallace Stevens*

CartoonStock.com

#4: Don't Fear "Proving" Your Predictions

- Cognitive bias
- Selection bias
- Recency bias
- Status Quo bias

If there have been no recent outages or incidents

- Perception that the system is very stable
- Complacency
- Inadequate preparation for potential failures

The type of measure used placed constraints on which statistics can be used. – Stanley Smith Stevens

#5: Don't Sweat the Bias

You are trialing a new deployment tool for speed and reliability

You sample via survey the senior engineers who were invited to try the new tool

1. **Self-selection Bias:**
Do the respondents cover the entire group?
2. Confirmation Bias: Is the leading team wording questions to get skewed answers
3. Recency Bias: Is the last experience what is being reported?
4. Status Quo Bias: Is change scary?

Definition of Statistics: The science of producing unreliable facts from reliable figures. – Evan Esar

#5: Don't Sweat the Bias

You are trialing a new deployment tool for speed and reliability

Q1: How happy are you with the new and improved tool?

Q2: Would you agree that the new tool has streamlined your deployment?

Q3: How beneficial has the new tool been?

1. Self-selection Bias: Do the respondents cover the entire group?
2. **Confirmation Bias:**
Is the wording of questions leading to skewed answers?
3. Recency Bias: Is the last experience what is being reported?
4. Status Quo Bias: Is change scary?

Definition of Statistics: The science of producing unreliable facts from reliable figures. – Evan Esar

DevOps Survey and Bias {Tape | Tires | Ply | Cut}

You are trialing a new deployment tool for speed and reliability

Q1: How happy are you with the new and improved tool based on your most recent deployment?

Q2: How much did the tool help in your last deployment?

Q3: Most recently, how beneficial has the new tool been?

1. Self-selection Bias: Do the respondents cover the entire group?
2. Confirmation Bias: Is the leading team wording questions to get skewed answers
3. **Recency Bias:**
Is the last experience what is being reported?
4. Status Quo Bias: Is change scary?

Definition of Statistics: The science of producing unreliable facts from reliable figures. – Evan Esar

DevOps Survey and Bias

You are trialing a new deployment tool for speed and reliability

Q1: How disruptive was the new tool?

Q2: Is the existing process more reliable?

Q3: How much effort did you spend on using the new tool?

1. Self-selection Bias: Do the respondents cover the entire group?
2. Confirmation Bias: Is the leading team wording questions to get skewed answers
3. Recency Bias: Is the last experience what is being reported?
4. **Status Quo Bias:**
Is change scary?

Definition of Statistics: The science of producing unreliable facts from reliable figures. – Evan Esar

#6: A Picture is Worth a Thousand Misleads

Approval Rating

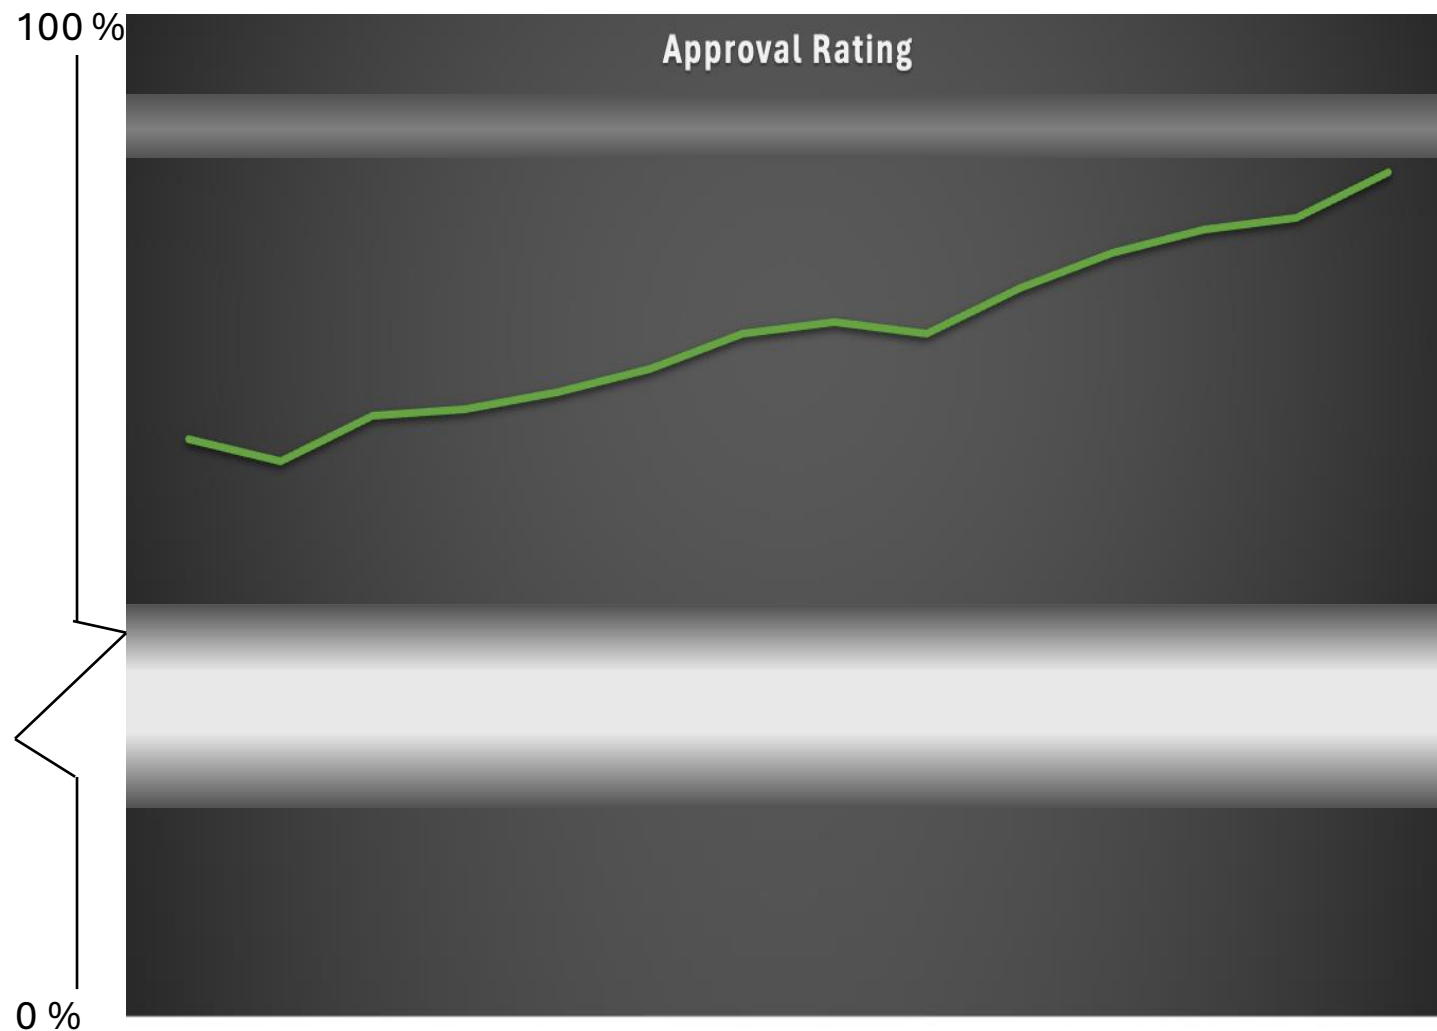

“And now, out of thin air, I present to you the very numbers you were hoping to see.”

CartoonStock.com

“Beware of misleading visual representations, such as manipulated graphs” – Darrell Huff

A Picture is Worth a Thousand Lies

“Statistics are used a lot like a drunk uses a lamppost: for support, not illumination” – Vin Scully

A Picture is Worth a Thousand Lies

“Statistics are used a lot like a drunk uses a lamppost: for support, not illumination” – Vin Scully

#7: Strongly “Suggest” the Answer

“There are two kinds of statistics, the kind you look up and the kind you make up” – Rex Stout

The Power of Suggestion – One Dimensional Picture

“You can shape statistics to make them look however you want them to.” – Jamie Carragher

#7: Assume No One Reads the Fine Print

Adventures In Misleading Graphs ~ Crazy Test Blog

There are 50 million Wii owners. 6% of that number is 3 million.

There are 30 million 360 owners. 11% of that number is 3.3 million.

There are 20 million PS3 owners. 10% of that number is 2 million.

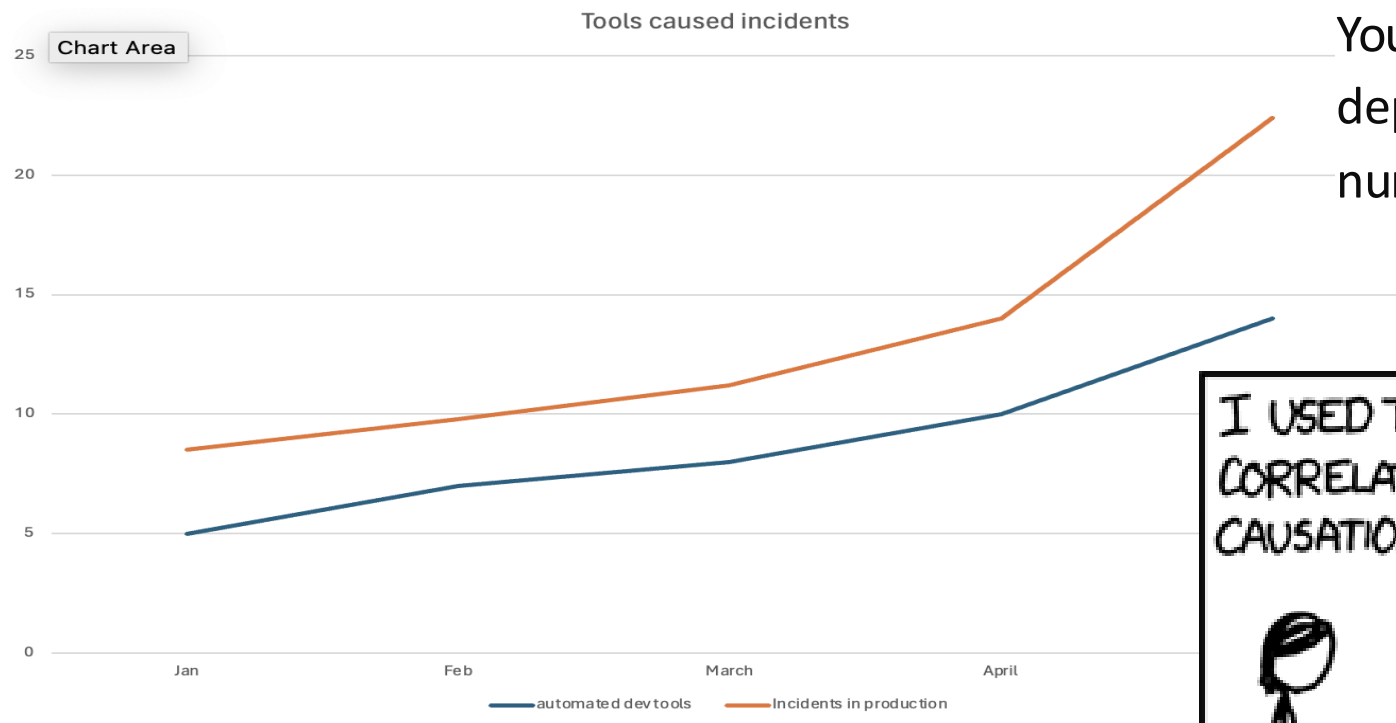

H/T Lee Evans

#8: Obviously If B Follows A, then A Causes B

You want to prove you have too much automation.

Your DevOps team notices that as the number of deployment automation scripts increases, the number of incidents in production increases.

Those who use 'Correlation is not the same as causation' as a magic incantation to dismiss all fact-using professions are fools holding a lit match in one hand and an open gas can in the other, screaming, 'One has nothing to do with the other!'

Usually Stated as “Correlation is Not Causation”

- Confounding Variable
- Reverse Causation
- Coincidence
- Bidirectional Causation
- Sampling Bias
- Measurement Errors

Correlation

Causation

My favorite sneaky correlation

Does drinking cause marriage?
or
does marriage cause drinking?

#9: Find (or Make) the data you want

Data Dredging and p-hacking

Data dredging

- The practice of searching through large volumes of data to find patterns or relationships that can be presented as statistically significant

P-hacking

- Manipulating the data analysis process to achieve statistically significant results.

"The answer to the ultimate question of life, the universe and everything is 42."

Douglas Adams, The Hitchhiker's Guide to the Galaxy

Instead of starting with a hypothesis and testing it, I instead abused the data to see what correlations shake out. It's a dangerous way to go about analysis, because any sufficiently large dataset will yield strong correlations completely at random. – Tyler Vigen

Double the fun.

Cherry picked block of years showing that global warming is fake.

“Eighty-two percent of the country understands that
it was a rigged election,”

March 2nd, 2024

#10: *Post Hoc, Ergo Propter Hoc* 'After this, therefore because of this'

Initial source : Public Religion Research Institute.

Publish date 01-Nov-2021
(they did a good job, btw)

Total Sample : 2508

People trusting far-right sources completely: 90

People trusting Fox News completely: ~66

So at 82%, 54 people out of 66 believe

Or 54 out of 2508

2.15%

FIGURE 4.1 Belief That the 2020 Presidential Election Was Stolen From Trump, by Party Affiliation and Trusted News Source

Percent who agree that the election was stolen from Donald Trump:

Source: PRRI 2021 American Values Survey.

42

“The Answer to the Ultimate Question
of Life, the Universe, and Everything”

The answer is pointless without the question>
“What do you get if you multiply 6 X 9?”

Which of course is 42_{13}

Arthur Dent

Marvin

A Simple Way to Mislead?

Statistics are informative, enlightening and pretty cool.
But always apply the ultimate test: “Does this make sense?”

Look out for:

- Conscious and Unconscious bias
- Confirmation bias
- Unclear or incomplete information
- Confounding variables
- Pretty pictures

Numbers don't lie. People do. – Hugh Baker

"Actually, according to this the numbers do lie."

CartoonStock.com
